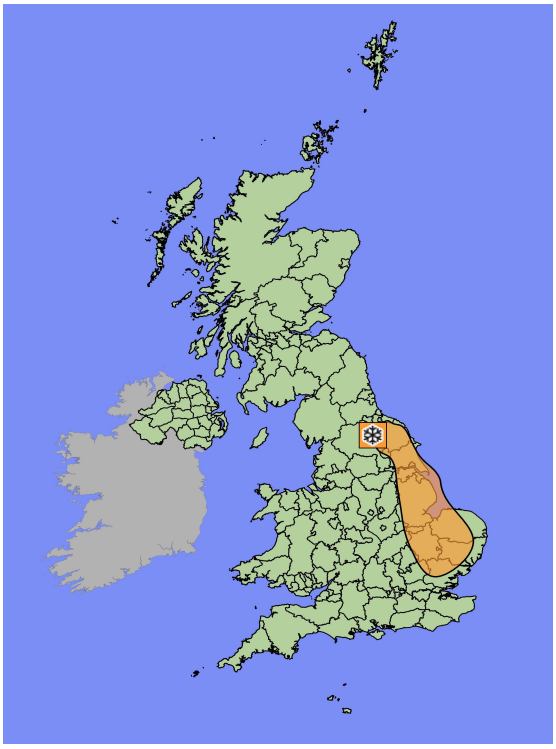
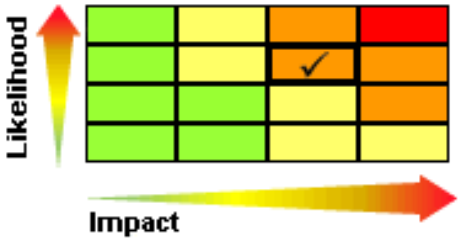
National Severe Weather Warning Service





Chief Forecasters Assessment
An Atlantic front coming east is meeting cold air of continental origin over eastern England, with precipitation expected to fall uniformly as snow through the second half of Monday. The front will slow down this afternoon and evening as a low pressure centre forms along it, clearing tonight as the low sinks south. By midnight there will still be some residual snow, though the worst will be over.

The Met Office have issued an **Amber Warning** of **Snow**

Valid from **09:00 on Mon, 14th Jan 2013** until **23:55 on Mon, 14th Jan 2013**

This is an update to the amber warning issued on Sunday. A band of snow will become slow moving over the area through today, fragmenting and dying out from the north through this evening and overnight. Accumulations of 5-10 cm look likely to occur in many areas.

The public should be prepared for the risk of disruption, particularly to travel.
